

MEMBERS OF CONGRESS AND STAFF – YOU ARE INVITED!

Reducing the Lifecycle Cost of Highways and Other Infrastructure Using Composites

A briefing hosted by the Congressional Composites Caucus

9:00am, Wednesday, October 12
122 Cannon House Office Building
Coffee-and-Donuts

Highways, bridges, waste water treatment facilities, dams, federal buildings, and other federally-funded infrastructure can last much longer, and save money, by using composites instead of outmoded materials. In addition, they are lighter, corrosion resistant, and often easier to install. Come learn about how composites have improved our infrastructure and how Congress can improve the quality of our nation's infrastructure.
